

Fertinagro Biotech

Our Company in the industrial area of Huelva, Spain, is looking for a senior project/process engineer with proven experience in process engineering for projects and operational plants. The company is involved in pilot plant work to adapt its process technology to the raw material and product requirements. The Company's objective is to have a commercial plant for the product through the phases of basic and detailed engineering, procurement and construction.

RESPONSIBILITIES

The senior engineer will be responsible for converting pilot plant data into the main engineering deliverable documents of a Process Design Package (PDP), including BFD (block flow diagrams), MHB (mass and heat balances), BOD (basis of design), PFDs, and PIDs. The senior engineer will be fundamental in the following phases of front-end engineering (FEED) and detailed engineering (DE), interfacing with the future engineering contractor.

QUALIFICATIONS

The preferred candidate is an industrial engineer with a specialization in chemical engineering or relevant experience in the chemical industry. Alternatively, a chemical engineer with suitable experience would also be considered.

REQUIREMENTS

- Minimum of 10 years of experience in projects in the chemical industry.
- English proficiency at minimum B2 level
- French would be an advantage
